Good morning,

The Pre-RD group has just completed sampling 80L (at 3.5ft depth) at substation T07W. Turbid water has resulted in multiple filter changes and has delayed pumping. The crew is not certain they will be able to complete the transect (7) this afternoon.

The RV Tieton is currently motoring to the east bank to collect another 80L sample at 3.5ft depth, and plans to start sampling the NAV channel if time/daylight allows.

Jonni

(b) (6)

Preparing a filter change

Pumping at 7W complete.
